Chapter 1

JSON2Batch

This file is autogenerated. Changes will be overwritten

1.1 JSON2Batch

Todo Update [README.md](#)

Beschreibung: A simple tool to convert json to batch.

Version: 0.2.2

Autoren: Elena Schwarzbach, Max Rodler, Simon Blum, Sonia Sinaci

Documentation: <https://dhbwprojectsit23.github.io/JSON2Bat>

Aktueller Plan:

- Verantwortlichkeiten zugewiesen
- "Sprint" bis ?

Verantwortlichkeiten:

- **CMake** → Simon
- **JsonParsing** → Elena und Sonia
- **Batch Creation** → Max
- **CLI** → Simon

Andere Arbeitspakete

- Error Handling
- Unit Tests
- Code Quality
- Documentation

Bezüglich Code Quality

- Kein using namespace

- Nur main im Global Namespace

Wichtige Commands

Branch wechseln

- git checkout -b NEUERBRANCH Pushen
- git push origin zum pullen
- git pull --prune

Kurze Doxygen Übersicht

Achtung: Die Leerzeichen zwischen @ und dem Wort dürfen nicht in den Code, sind nur da, damit Doxygen die nicht aufnimmt! /**

- @ brief Kurze Beschreibung
- @ details Längere
- @ todo
- @ bug
- @ param PARAMETERNAME was der macht
- @ return was die funktion return
- @ throws **/

Chapter 2

Chapter 3

Topic Index

3.1 Topics

Here is a list of all topics with brief descriptions:

StyleHelpers	15
------------------------	----

Chapter 4

Namespace Index

4.1 Namespace List

Here is a list of all namespaces with brief descriptions:

cli	Includes everything regarding the CLI	17
config	18
exceptions	Namespace used for customized exceptions	20
parsing	The namespace containing everything relevant to parsing	20
utilities	Includes all utilities	21

Chapter 5

Hierarchical Index

5.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

BatchCreator	23
cli::CommandLineHandler	29
std::exception	
exceptions::CustomException	34
exceptions::FailedToOpenFileException	36
exceptions::FileExistsException	44
exceptions::InvalidKeyException	46
exceptions::InvalidTypeException	48
exceptions::InvalidValueException	51
exceptions::MissingKeyException	68
exceptions::MissingTypeException	71
exceptions::NoSuchDirException	73
exceptions::ParsingException	75
exceptions::UnreachableCodeException	77
parsing::FileData	38
parsing::JsonHandler	53
parsing::KeyValidator	62
options	75
utilities::Utils	79

Chapter 6

Class Index

6.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

BatchCreator	
Erstellt Batch Datei	23
cli::CommandLineHandler	
Responsible for the Command Line Interface	29
exceptions::CustomException	
Base class for all custom exceptions	34
exceptions::FailedToOpenFileException	
Exception for failed to open file	36
parsing::FileData	
This class contains all data from the json file	38
exceptions::FileExistsException	
Exception for an already existing outputfile	44
exceptions::InvalidKeyException	
Exception for invalid keys	46
exceptions::InvalidTypeException	
Exception for invalid types	48
exceptions::InvalidValueException	
Exception for an invalid (usually empty) value field	51
parsing::JsonHandler	
This file reads all data from the json file	53
parsing::KeyValidator	
Validates keys of a Json::Value object	62
exceptions::MissingKeyException	
Exception for missing keys within entries	68
exceptions::MissingTypeException	
Exception for missing types of entries	71
exceptions::NoSuchDirException	
Exception for no such directory	73
options	
The struct containing all possible options	75
exceptions::ParsingException	
Exception for syntax errors within the json file	75
exceptions::UnreachableCodeException	
Exception for when the application reaches code it shouldn't reach	77
utilities::Utils	
Responsible for utility function	79

Chapter 7

File Index

7.1 File List

Here is a list of all files with brief descriptions:

src/main.cpp	
Contains the main function	101
src/include/BatchCreator.hpp	
Creates batch file	83
src/include/CommandLineHandler.hpp	
Responsible for the Command Line Interface	85
src/include/config.hpp	
Configures general project information	87
src/include/Exceptions.hpp	
Contains all the custom exceptions used in the project	90
src/include/FileData.hpp	
This file contains the FileData class	93
src/include/JsonHandler.hpp	
This file contains the JsonHandler class	96
src/include/KeyValidator.hpp	
This file contains the KeyValidator class	98
src/include/Utils.hpp	
.	100
src/sources/BatchCreator.cpp	
.	107
src/sources/CommandLineHandler.cpp	
Implementation for the Command Line Interface	109
src/sources/FileData.cpp	
.	112
src/sources/JsonHandler.cpp	
.	114
src/sources/KeyValidator.cpp	
.	116
src/sources/Utils.cpp	
Implementation for the Utils class	118

Chapter 8

Topic Documentation

8.1 StyleHelpers

Static variables to help with CLI styling.

Static variables to help with CLI styling.

A group of strings, that use escape sequences to easily style the command line interface on Unix systems. When compiling for Windows all of these strings will be empty, as escape sequences can't be used the same way.

Chapter 9

Namespace Documentation

9.1 cli Namespace Reference

Includes everything regarding the CLI.

Classes

- class [CommandLineHandler](#)
Responsible for the Command Line Interface.

Variables

- static const struct option [options](#) []

9.1.1 Detailed Description

Includes everything regarding the CLI.

This namespace includes all the code regarding the Command Line Interface. This includes the [CommandLineHandler](#) Class, the struct for the options and helpers for Styling.

See also

[CommandLineHandler](#)
[options](#)
[StyleHelpers](#)

9.1.2 Variable Documentation

9.1.2.1 options

```
const struct option cli::options[] [static]
```

Initial value:

```
= {  
    {"help", no_argument, nullptr, 'h'},  
    {"version", no_argument, nullptr, 'v'},  
    {"credits", no_argument, nullptr, 'c'},  
    {"verbose", no_argument, nullptr, 0},  
    {"outdir", required_argument, nullptr, 'o'},  
    nullptr  
}
```

Definition at line 117 of file [CommandLineHandler.hpp](#).

9.2 config Namespace Reference

Variables

- constexpr auto [LOG_CONFIG](#)
- constexpr auto [EXECUTABLE_NAME](#) = "json2batch"
- constexpr auto [MAJOR_VERSION](#) = "0"
- constexpr auto [MINOR_VERSION](#) = "2"
- constexpr auto [PATCH_VERSION](#) = "2"
- constexpr auto [DESCRIPTION](#) = "A simple tool to convert json to batch."
- constexpr auto [PROJECT_NAME](#) = "JSON2Batch"
- constexpr auto [AUTHORS](#)
- constexpr auto [HOMEPAGE_URL](#)

9.2.1 Variable Documentation

9.2.1.1 AUTHORS

```
constexpr auto config::AUTHORS [inline], [constexpr]
```

Initial value:

```
=  
    "Elena Schwarzbach, Max Rodler, Simon Blum, Sonia Sinaci"
```

Definition at line 32 of file [config.hpp](#).

9.2.1.2 DESCRIPTION

```
constexpr auto config::DESCRIPTION = "A simple tool to convert json to batch." [inline],  
[constexpr]
```

Definition at line 30 of file [config.hpp](#).

9.2.1.3 EXECUTABLE_NAME

```
constexpr auto config::EXECUTABLE_NAME = "json2batch" [inline], [constexpr]
```

Definition at line 26 of file [config.hpp](#).

9.2.1.4 HOMEPAGE_URL

```
constexpr auto config::HOMEPAGE_URL [inline], [constexpr]
```

Initial value:

```
=  
    "https://dhwprojectsit23.github.io/JSON2Bat"
```

Definition at line 34 of file [config.hpp](#).

9.2.1.5 LOG_CONFIG

```
constexpr auto config::LOG_CONFIG [inline], [constexpr]
```

Initial value:

```
= "/home/simon/l_Coding/projectJsonToBat/"  
    "build/Release/config/easylogging.conf"
```

Definition at line 24 of file [config.hpp](#).

9.2.1.6 MAJOR_VERSION

```
constexpr auto config::MAJOR_VERSION = "0" [inline], [constexpr]
```

Definition at line 27 of file [config.hpp](#).

9.2.1.7 MINOR_VERSION

```
constexpr auto config::MINOR_VERSION = "2" [inline], [constexpr]
```

Definition at line 28 of file [config.hpp](#).

9.2.1.8 PATCH_VERSION

```
constexpr auto config::PATCH_VERSION = "2" [inline], [constexpr]
```

Definition at line 29 of file [config.hpp](#).

9.2.1.9 PROJECT_NAME

```
constexpr auto config::PROJECT_NAME = "JSON2Batch" [inline], [constexpr]
```

Definition at line 31 of file [config.hpp](#).

9.3 exceptions Namespace Reference

Namespace used for customized exceptions.

Classes

- class [CustomException](#)
Base class for all custom exceptions.
- class [FailedToOpenFileException](#)
- class [FileExistsException](#)
Exception for an already existing outputfile.
- class [InvalidKeyException](#)
Exception for invalid keys.
- class [InvalidTypeException](#)
Exception for invalid types.
- class [InvalidValueException](#)
Exception for an ivalid (usually empty) value field.
- class [MissingKeyException](#)
Exception for missing keys within entries.
- class [MissingTypeException](#)
Exception for missing types of entries.
- class [NoSuchDirException](#)
- class [ParsingException](#)
Exception for syntax errors within the json file.
- class [UnreachableCodeException](#)
Exception for when the application reaches code it shouldn't reach.

9.3.1 Detailed Description

Namespace used for customized exceptions.

9.4 parsing Namespace Reference

The namespace containing everything relevant to parsing.

Classes

- class [FileData](#)
This class contains all data from the json file.
- class [JsonHandler](#)
This file reads all data from the json file.
- class [KeyValidator](#)
Validates keys of a `Json::Value` object.

9.4.1 Detailed Description

The namespace containing everything relevant to parsing.

This namespace contains all relevant classes to parsing the json file and creating the batch output.

See also

[JsonHandler](#)

[FileData](#)

[KeyValidator](#)

[BatchCreator](#)

Todo Document – map/set for efficient

9.5 utilities Namespace Reference

Includes all utilities.

Classes

- class [Utils](#)
Responsible for utility function.

9.5.1 Detailed Description

Includes all utilities.

This namespace includes the utility class with utility functions which can be used throughout the project.

See also

[Utils](#)

Chapter 10

Class Documentation

10.1 BatchCreator Class Reference

Erstellt Batch Datei.

```
#include <BatchCreator.hpp>
```

Public Member Functions

- [BatchCreator](#) (std::shared_ptr< [parsing::FileData](#) > [fileData](#))
Initialisiert [BatchCreator](#).
- std::shared_ptr< std::stringstream > [getDataStream](#) () const

Private Member Functions

- void [createBatch](#) ()
Setzt batch Datei zusammen.
- void [writeStart](#) () const
Anfang der Batch Datei.
- void [writeHideShell](#) () const
Sichtbarkeit Konsole.
- void [writeCommands](#) () const
Befehle ausführen.
- void [writeEnvVariables](#) () const
Umgebungsvariablen setzten.
- void [writePathVariables](#) () const
Pfade setzten.
- void [writeApp](#) () const
Öffnet Anwendung falls gewünscht.
- void [writeEnd](#) () const
Ende der Batch Datei.

Private Attributes

- std::shared_ptr< std::stringstream > [dataStream](#)
- std::shared_ptr< [parsing::FileData](#) > [fileData](#)

10.1.1 Detailed Description

Erstellt Batch Datei.

Wandelt Elemente aus JSON-Datei in Batch-Format um

See also

Definition at line 27 of file [BatchCreator.hpp](#).

10.1.2 Constructor & Destructor Documentation

10.1.2.1 BatchCreator()

```
BatchCreator::BatchCreator (
    std::shared_ptr< parsing::FileData > fileData ) [explicit]
```

Initialisiert [BatchCreator](#).

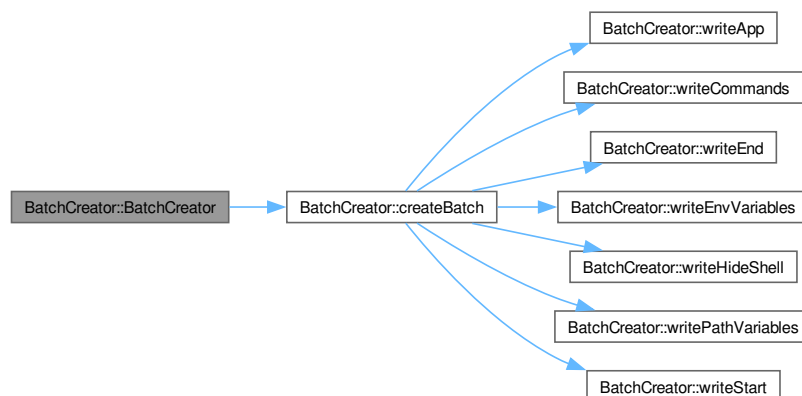

Parameters

<i>filename</i>	
-----------------	--

Definition at line 17 of file [BatchCreator.cpp](#).

10.2 cli::CommandLineHandler Class Reference

Responsible for the Command Line Interface.

```
#include <CommandLineHandler.hpp>
```

Public Member Functions

- [CommandLineHandler](#) ()=delete
The Constructor of the [CommandLineHandler](#) Class.
- [~CommandLineHandler](#) ()=delete
The Destructor of the [CommandLineHandler](#) Class.

Static Public Member Functions

- static void [printHelp](#) ()
Prints the help message.
- static void [printVersion](#) ()
Prints the version message.
- static void [printCredits](#) ()
Prints the credits message.
- static std::tuple< std::optional< std::string >, std::vector< std::string > > [parseArguments](#) (int argc, char *argv[])
Parses the Command Line Arguments.

10.2.1 Detailed Description

Responsible for the Command Line Interface.

This class is responsible for parsing the command line arguments, printing Help/Version/Credits messages and returning inputted files.

Author

Simon Blum

Date

2024-04-18

Version

0.1.5

10.2.2 Constructor & Destructor Documentation

10.2.2.1 CommandLineHandler()

```
cli::CommandLineHandler::CommandLineHandler ( ) [delete]
```

The Constructor of the [CommandLineHandler](#) Class.

Note

As all functions are static it should not be used and as such is private.

10.2.2.2 ~CommandLineHandler()

```
cli::CommandLineHandler::~~CommandLineHandler ( ) [delete]
```

The Destructor of the [CommandLineHandler](#) Class.

Note

As all functions are static it should not be used and as such is private.

10.2.3 Member Function Documentation

10.2.3.1 parseArguments()

```
std::tuple< std::optional< std::string >, std::vector< std::string > > cli::CommandLine↵
Handler::parseArguments (
    int argc,
    char * argv[] ) [static]
```

Parses the Command Line Arguments.

This function uses the "getopt.h" library to parse all options given and then returns all files which are given as arguments.

Parameters

<i>argc</i>	The number of arguments given
<i>argv</i>	The arguments given

Exceptions

<i>std::logic_error</i>	
-------------------------	--

Returns

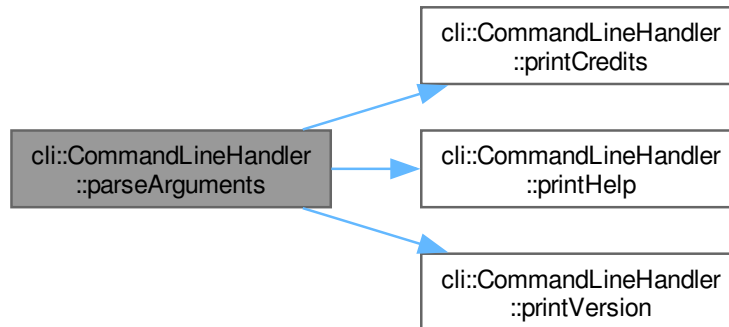

Returns a vector of strings containing all filenames.

10.5.1 Detailed Description

This class contains all data from the json file.

The data from the json file is parsed by the [JsonHandler](#) and then assigned to the attributes of an instance of this class. This class also handles a part of the error handling.

Definition at line 30 of file [FileData.hpp](#).

10.5.2 Member Function Documentation

10.5.2.1 addCommand()

```
void parsing::FileData::addCommand (
    const std::string & command )
```

Adds a given command to this->commands.

Makes sure, that the given command value is not empty and then add's it to the commands attribute.

Parameters

<i>command</i>	The command to be added
----------------	-------------------------

Exceptions

exceptions::InvalidValueException	
---	--

Definition at line 55 of file [FileData.cpp](#).

References [commands](#).

10.5.2.2 addEnvironmentVariable()

```
void parsing::FileData::addEnvironmentVariable (
    const std::string & name,
    const std::string & value )
```

Adds a given tuple to this->environmentVariables.

Makes sure that neither the key nor the value is empty and then adds a tuple with both values to the environmentVariables attribute

Parameters

<i>name</i>	The name of the env variable
<i>value</i>	The value of the env variable

Exceptions

exceptions::InvalidValueException	
---	--

Definition at line 66 of file [FileData.cpp](#).

References [environmentVariables](#).

10.5.2.3 addPathValue()

```
void parsing::FileData::addPathValue (
    const std::string & pathValue )
```

Add's a given value to this->pathValues.

Makes sure that the given value is not empty and then assigns it to the given pathValues attribute

Parameters

<i>pathValue</i>	The value to be added
------------------	-----------------------

Exceptions

exceptions::InvalidValueException	
---	--

Definition at line 82 of file [FileData.cpp](#).

References [pathValues](#).

10.5.2.4 getApplication()

```
const std::optional< std::string > & parsing::FileData::getApplication ( ) const [inline]
```

Getter for this->application.

Returns

The assigned application

Definition at line 114 of file [FileData.hpp](#).

References [application](#).

10.5.2.5 getCommands()

```
const std::vector< std::string > & parsing::FileData::getCommands ( ) const [inline]
```

Getter for this->commands.

Returns

The vector of assigned commands

Definition at line 122 of file [FileData.hpp](#).

References [commands](#).

10.5.2.6 getEnvironmentVariables()

```
const std::vector< std::tuple< std::string, std::string > > & parsing::FileData::getEnvironmentVariables ( ) const [inline]
```

Getter for this->environmentVariables.

Returns

The vector of assigned env variables

Definition at line 131 of file [FileData.hpp](#).

References [environmentVariables](#).

10.5.2.7 getHideShell()

```
bool parsing::FileData::getHideShell ( ) const [inline]
```

Getter for this->hideShell.

Returns

The assigned value for hideshow

Definition at line 108 of file [FileData.hpp](#).

References [hideShell](#).

10.5.2.8 getOutputFile()

```
const std::string & parsing::FileData::getOutputFile ( ) const [inline]
```

Getter for this->outputfile.

Returns

The assigned outputfile

Definition at line 102 of file [FileData.hpp](#).

References [outputfile](#).

10.5.2.9 getPathValues()

```
const std::vector< std::string > & parsing::FileData::getPathValues ( ) const [inline]
```

Getter for this->pathValues.

Returns

The vector of assigned pathValues

Definition at line 139 of file [FileData.hpp](#).

References [pathValues](#).

10.5.2.10 setApplication()

```
void parsing::FileData::setApplication (
    const std::string & newApplication )
```

Setter for this->application.

Set's the application attribute. Return's if the given string is empty.

Parameters

<i>newApplication</i>	The application to be set
-----------------------	---------------------------

Definition at line 45 of file [FileData.cpp](#).

References [application](#).

10.5.2.11 setHideShell()

```
void parsing::FileData::setHideShell (
    bool newHideShell ) [inline]
```

Setter for this->hideshell.

Parameters

<i>newHideShell</i>	The hideshell value to be set
---------------------	-------------------------------

Definition at line 48 of file [FileData.hpp](#).

References [hideShell](#).

10.5.2.12 setOutputFile()

```
void parsing::FileData::setOutputFile (
    std::string & newOutputfile )
```

Setter for this->outputfile.

Checks that neither the given string is empty, nor that the outputfile is already set and then assigns the newOutputfile to the instance.

Parameters

<i>newOutputfile</i>	The outputfile to be set
----------------------	--------------------------

Exceptions

exceptions::InvalidValueException	
---	--

Definition at line 17 of file [FileData.cpp](#).

References [outputfile](#).

10.10 parsing::JsonHandler Class Reference

This file reads all data from the json file.

```
#include <JsonHandler.hpp>
```

Public Member Functions

- [JsonHandler](#) ()
Constructor without arguments.
- [JsonHandler](#) (const std::string &filename)
The constructor.
- std::shared_ptr< [FileData](#) > [getFileData](#) ()
Retrieve the data from the json file.

Private Member Functions

- void [assignOutputFile](#) () const
Assigns the outputfile to this->data.
- void [assignHideShell](#) () const
Assigns the hideshow value to this->data.
- void [assignApplication](#) () const
Assigns application to this->data.
- void [assignEntries](#) () const
Assigns entries to this->data.
- void [assignCommand](#) (const Json::Value &entry) const
Assigns an command to this->data.
- void [assignEnvironmentVariable](#) (const Json::Value &entry) const
Assigns an environmentVariable to this->data.
- void [assignPathValue](#) (const Json::Value &entry) const
Assigns a path value to this->data.
- std::shared_ptr< [FileData](#) > [createFileData](#) ()
Creates the FileData instance.

Static Private Member Functions

- static `std::shared_ptr< Json::Value > parseFile` (const `std::string` &filename)
Parses the given json file.

Private Attributes

- `std::shared_ptr< Json::Value > root`
- `std::shared_ptr< FileData > data`

10.10.1 Detailed Description

This file reads all data from the json file.

This file uses the jsoncpp library to parse all data from a json file, validate it to some degree.

See also

<https://github.com/open-source-parsers/jsoncpp>

Definition at line 45 of file [JsonHandler.hpp](#).

10.10.2 Constructor & Destructor Documentation

10.10.2.1 JsonHandler() [1/2]

```
parsing::JsonHandler::JsonHandler ( ) [inline]
```

Constructor without arguments.

This constructor can be used to initialise an instance in an outer scope and then assign it values from an inner scope.

Definition at line 53 of file [JsonHandler.hpp](#).

10.10.2.2 JsonHandler() [2/2]

```
parsing::JsonHandler::JsonHandler (
    const std::string & filename ) [explicit]
```

The constructor.

This constructor calls this->[parseFile\(\)](#) when called.

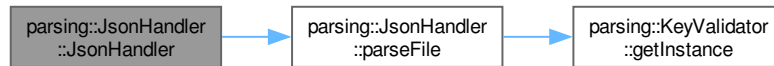

Parameters

<i>filename</i>	Name of the json file
-----------------	-----------------------

Definition at line 19 of file [JsonHandler.cpp](#).

References [parseFile\(\)](#), and [root](#).

Here is the call graph for this function:

10.10.3 Member Function Documentation

10.10.3.1 assignApplication()

```
void parsing::JsonHandler::assignApplication ( ) const [private]
```

Assigns application to this->data.

Retrieves the value of the application key from `Json::Value this->root` and defaults to an empty string.

Definition at line 75 of file [JsonHandler.cpp](#).

References [data](#), and [root](#).

Here is the caller graph for this function:

10.10.3.2 assignCommand()

```
void parsing::JsonHandler::assignCommand (
    const Json::Value & entry ) const [private]
```

Assigns an command to this->data.

Parameters

<i>entry</i>	The entry with the command
--------------	----------------------------

Definition at line 104 of file [JsonHandler.cpp](#).

References [data](#).

Here is the caller graph for this function:

10.10.3.3 assignEntries()

```
void parsing::JsonHandler::assignEntries ( ) const [private]
```

Assigns entries to this->data.

Goes through each of the entries from `Json::Value` this->root and calls the relevant method depending on it's type. All "type" keys should be valid by this point.

Parameters

<i>entry</i>	Json::Value containing an array with entries
--------------	--

Exceptions

exceptions::UnreachableCodeException	
--	--

Definition at line 80 of file [JsonHandler.cpp](#).

References [assignCommand\(\)](#), [assignEnvironmentVariable\(\)](#), [assignPathValue\(\)](#), and [root](#).

Here is the call graph for this function:

Here is the caller graph for this function:

10.10.3.4 assignEnvironmentVariable()

```
void parsing::JsonHandler::assignEnvironmentVariable (
    const Json::Value & entry ) const [private]
```

Assigns an environmentVariable to this->data.

Parameters

<i>entry</i>	The entry with the environmentVariable
--------------	--

Definition at line 109 of file [JsonHandler.cpp](#).

References [data](#).

Here is the caller graph for this function:

10.10.3.5 assignHideShell()

```
void parsing::JsonHandler::assignHideShell ( ) const [private]
```

Assigns the hideshell value to this->data.

Retrieves the value of the hideshell key from Json::Value this->root and defaults to negative.

Definition at line 69 of file [JsonHandler.cpp](#).

References [data](#), and [root](#).

Here is the caller graph for this function:

10.10.3.6 assignOutputFile()

```
void parsing::JsonHandler::assignOutputFile ( ) const [private]
```

Assigns the outputfile to this->data.

Retrieves the outputfile from Json::Value this->root and makes sure, that the file doesn't already exist.

Exceptions

exceptions::FileExistsException

Definition at line 62 of file [JsonHandler.cpp](#).

References [data](#), and [root](#).

Here is the caller graph for this function:

10.10.3.7 assignPathValue()

```
void parsing::JsonHandler::assignPathValue (
    const Json::Value & entry ) const [private]
```

Assigns a path value to this->data.

Parameters

<i>entry</i>	The entry with the path value
--------------	-------------------------------

Definition at line 116 of file [JsonHandler.cpp](#).

References [data](#).

Here is the caller graph for this function:

10.10.3.8 createFileData()

```
std::shared_ptr< FileData > parsing::JsonHandler::createFileData ( ) [private]
```

Creates the [FileData](#) instance.

Instantiates the [FileData](#) instance, calls all nessecary functions and returns a shared pointer to it.

Returns

Pointer to the created instance of [FileData](#)

Definition at line 52 of file [JsonHandler.cpp](#).

References [assignApplication\(\)](#), [assignEntries\(\)](#), [assignHideShell\(\)](#), [assignOutputFile\(\)](#), and [data](#).

Here is the call graph for this function:

Here is the caller graph for this function:

10.10.3.9 getFileData()

```
std::shared_ptr< FileData > parsing::JsonHandler::getFileData ( )
```

Retrieve the data from the json file.

This method calls this->[createFileData\(\)](#) needed to retrieve the values from the `Json::Value` this->`root` and then returns a shared pointer to the created [FileData](#) object.

Returns

Pointer to the [FileData](#) Object with the parsed data from json

Definition at line 47 of file [JsonHandler.cpp](#).

References [createFileData\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

**10.10.3.10 parseFile()**

```
std::shared_ptr< Json::Value > parsing::JsonHandler::parseFile (
    const std::string & filename ) [static], [private]
```

Parses the given json file.

This method first creates a new `Json::Value` instance and then tries to parse the given json file. It then validates the keys of the instance using the [KeyValidator](#) class.

Parameters

<i>filename</i>	The name of the file wich should be parsed
-----------------	--

Returns

A shared pointer to the `Json::Value` instance

10.10.4 Member Data Documentation

10.10.4.1 data

```
std::shared_ptr<FileData> parsing::JsonHandler::data [private]
```

Definition at line 153 of file [JsonHandler.hpp](#).

10.10.4.2 root

`std::shared_ptr<Json::Value> parsing::JsonHandler::root [private]`

Definition at line 152 of file [JsonHandler.hpp](#).

The documentation for this class was generated from the following files:

- [src/include/JsonHandler.hpp](#)
- [src/sources/JsonHandler.cpp](#)

10.11 parsing::KeyValidator Class Reference

Validates keys of a `Json::Value` object.

```
#include <KeyValidator.hpp>
```

Public Member Functions

- `std::vector< std::tuple< int, std::string > > validateKeys` (const `Json::Value` &root, const `std::string` &filename)
Validate keys off a `Json::Value` object.

Static Public Member Functions

- static `KeyValidator` & `getInstance` ()
Get the instance of this class.

Private Member Functions

- `std::vector< std::tuple< int, std::string > > getWrongKeys` (const `Json::Value` &root, const `std::string` &filename) const
Retrieve the wrong keys from a `Json::Value` object.
- void `validateTypes` (const `std::string` &filename, const `Json::Value` &entry, const `std::unordered_set< std::string >` &entryKeys)
Validates types from the entries array.
- `std::vector< std::tuple< int, std::string > > validateEntries` (const `std::string` &filename, const `std::unordered_set< std::string >` &entryKeys) const
Validates that an entries 'type' key is valid.

Static Private Member Functions

- static `std::optional< int >` `getUnknownKeyLine` (const `std::string` &filename, const `std::string` &wrongKey)

Private Attributes

- `std::unordered_set< std::string >` `validKeys`
- `std::unordered_set< std::string >` `validEntryKeys`
- `std::unordered_map< std::string_view, std::vector< std::string > >` `typeToKeys`

10.11.1 Detailed Description

Validates keys of a `Json::Value` object.

This class is singleton. That way when multiple files are parsed with the application, the `validKeys` and `validEntryKeys` field only have to be allocated once.

Definition at line 28 of file [KeyValidator.hpp](#).

10.11.2 Member Function Documentation

10.11.2.1 getInstance()

```
KeyValidator & parsing::KeyValidator::getInstance ( ) [static]
```

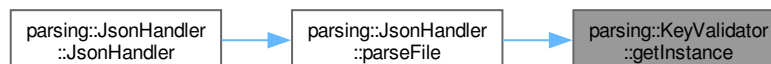

Get the instance of this class.

Returns

Reference to the instance of this class

Definition at line 21 of file [KeyValidator.cpp](#).

Here is the caller graph for this function:

10.11.2.2 getUnknownKeyLine()

```
std::optional< int > parsing::KeyValidator::getUnknownKeyLine (
    const std::string & filename,
    const std::string & wrongKey ) [static], [private]
```

Parameters

<i>filename</i>	
<i>wrongKey</i>	

Returns

Todo Documentation

Definition at line 117 of file [KeyValidator.cpp](#).

Here is the caller graph for this function:

10.11.2.3 getWrongKeys()

```
std::vector< std::tuple< int, std::string > > parsing::KeyValidator::getWrongKeys (
    const Json::Value & root,
    const std::string & filename ) const [private]
```

Retrieve the wrong keys from a `Json::Value` object.

This method goes through each key of the `Json::Value` object and makes sure it's valid.

Parameters

<i>root</i>	The <code>Json::Value</code> object to be validated.
<i>filename</i>	The filename from which 'root' is from.

Returns

A vector with tuples, containing the line and name of invalid types.

Definition at line 51 of file [KeyValidator.cpp](#).

References [getUnknownKeyLine\(\)](#), and [validKeys](#).

Here is the call graph for this function:

Here is the caller graph for this function:

10.11.2.4 validateEntries()

```
std::vector< std::tuple< int, std::string > > parsing::KeyValidator::validateEntries (
    const std::string & filename,
    const std::unordered_set< std::string > & entryKeys ) const [private]
```

Validates that an entries 'type' key is valid.

Parameters

<i>filename</i>	
<i>entryKeys</i>	

Returns

Todo Documentation

Definition at line 71 of file [KeyValidator.cpp](#).

References [getUnknownKeyLine\(\)](#), and [validEntryKeys](#).

Here is the call graph for this function:

Here is the caller graph for this function:

10.11.2.5 validateKeys()

```
std::vector< std::tuple< int, std::string > > parsing::KeyValidator::validateKeys (
    const Json::Value & root,
    const std::string & filename )
```

Validate keys off a `Json::Value` object.

This method goes through the `MemberNames` of a `Json::Value` object and validates, that they are part of the `validKeys` attribute. It calls the necessary methods to validate the keys within the entries array.

Parameters

<i>root</i>	The <code>Json::Value</code> object to be validated.
<i>filename</i>	The filename from which 'root' is from.

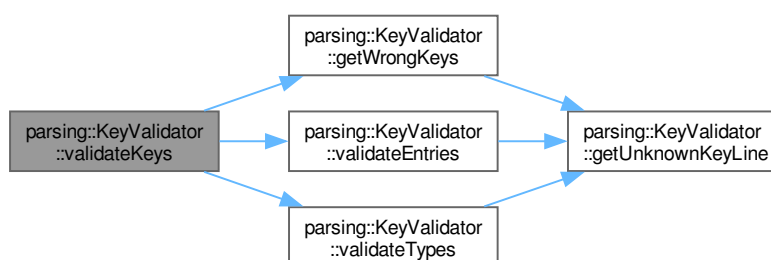

Returns

A vector with tuples, containing the line and name of invalid types.

Definition at line 28 of file [KeyValidator.cpp](#).

References [getWrongKeys\(\)](#), [validateEntries\(\)](#), and [validateTypes\(\)](#).

Here is the call graph for this function:

10.11.2.6 validateTypes()

```
void parsing::KeyValidator::validateTypes (
    const std::string & filename,
    const Json::Value & entry,
    const std::unordered_set< std::string > & entryKeys ) [private]
```

Validates types from the entries array.

Makes sure that each type has it's according keys, needed to parse it.

Parameters

<i>filename</i>	The filename from which 'entry' is from
<i>entry</i>	
<i>entryKeys</i>	

Definition at line 92 of file [KeyValidator.cpp](#).

References [getUnknownKeyLine\(\)](#), and [typeToKeys](#).

11.8 src/include/Exceptions.hpp File Reference

Contains all the custom exceptions used in the project.

```
#include "LoggingWrapper.hpp"
#include <string>
```

Include dependency graph for Exceptions.hpp:

This graph shows which files directly or indirectly include this file:

Classes

- class [exceptions::CustomException](#)
Base class for all custom exceptions.
- class [exceptions::ParsingException](#)
Exception for syntax errors within the json file.
- class [exceptions::FileExistsException](#)
Exception for an already existing outputfile.
- class [exceptions::InvalidValueException](#)
Exception for an invalid (usually empty) value field.
- class [exceptions::InvalidKeyException](#)
Exception for invalid keys.
- class [exceptions::InvalidTypeException](#)
Exception for invalid types.
- class [exceptions::MissingKeyException](#)
Exception for missing keys within entries.
- class [exceptions::MissingTypeException](#)
Exception for missing types of entries.
- class [exceptions::UnreachableCodeException](#)
Exception for when the application reaches code it shouldn't reach.
- class [exceptions::FailedToOpenFileException](#)
- class [exceptions::NoSuchDirException](#)

Namespaces

- namespace [exceptions](#)

Namespace used for customized exceptions.

11.8.1 Detailed Description

Contains all the custom exceptions used in the project.

```

11.18 src/main.cpp File Reference

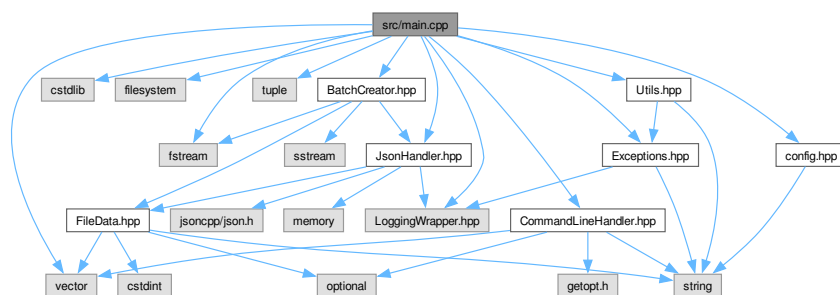

Contains the main function.

```

#include <LoggingWrapper.hpp>
#include <cstdlib>
#include <filesystem>
#include <fstream>
#include <tuple>
#include <vector>
#include "BatchCreator.hpp"
#include "CommandLineHandler.hpp"
#include "Exceptions.hpp"
#include "JsonHandler.hpp"
#include "Utils.hpp"
#include "config.hpp"

```

Include dependency graph for main.cpp:

Functions

- `INITIALIZE_EASYLOGGINGPP std::tuple< std::vector< std::string >, std::string > parseAndValidateArgs (int argc, char *argv[])`
- `std::vector< std::string > validateFiles (const std::vector< std::string > &files)`
- `void parseFile (const std::string &file, const std::string &outputDirectory)`
- `int main (int argc, char *argv[])`

Main function of the program.

11.18.1 Detailed Description

Contains the main function.

Author

Elena Schwarzbach, Max Rodler, Simon Blum, Sonia Sinaci

Date

2024-04-18

Version

0.1.5

The main function is responsible for connection all parts of the programm. It calls all relevant classes and finishes when everything is done.

Copyright

11.18.2 Function Documentation

11.18.2.1 `main()`

```
int main (  
    int argc,  
    char * argv[] )
```

Main function of the program.

The main function is responsible for connection all parts of the programm. It calls all relevant classes and finishes when everything is done.

Parameters

<i>argc</i>	The number of arguments given
<i>argv</i>	Th command line arguments given

Returns

Returns 0 on success, 1 on failure
